Testing Stream

Mock Test Sample 1 Max Marks 25

1)The class management system be able to print out a list of the students in the class,including name,id number and major information,with 25 names on each page.Is this a functional or non-functional requirement?

a)functional

b)Non-functional

c)Volume

d)Load

2)What serves as an input for Design?

a. Software functional specification

b. Software requirement specification

c. Both A and B

d. None of the above

3)Name the model that is being used extensively in the commercial world because of its performance in a market-driven environment, that significantly reduces technical risk and more easily incorporates new technology and innovations.

a. RAD model

b. Waterfall model

c. Agile

d. None of the above

4)Analysts use this tool to analyze the flow of data through an information system

a Decision trees

b Structured English

c Data Flow diagrams

d Any of the above

5) This is another name for a working model that demonstrates how part of an information system works.

a Prototype

b Dataflow diagram

c Case tool

d None of the above

6) Which statement about a prototype is true?

a. It is a functional model of the entire system.

b. It is the complete untested product ready for final review by the customer.

c. It is necessary in order to accurately verify that the product is progressing in accordance with requirements specifications.

d. It is a full-scale model of the entire system at some partial stage in development showing the functional form of the system.

7) The quick and adhoc approach talks about

a. Throwaway

b. Evolutionary

c. Spiral

d. Waterfall

8)A data dictionary was created during the requirements analysis phase of a software engineering project. What information does it contain?

a. Data Type

b. Restrictions

c. Content Description

d. All the given options

9. Which of these is a graphical notation for depicting procedural detail?

a. process diagram

b. decision table

c. E-R diagram

d. flowchart

10) The linear sequential model of software development is

a) a reasonable approach when requirements are well defined

b) a good approach when a working program is required quickly

c) the best approach to use for projects with large development teams

d) an old fashioned model that cannot be used in a modern context

11.What is Requirement Analysis?

a)The process of defining “What the system should do” without

describing, “ How it should be done”?

b)The process of defining “What the system should do” and “ How it should be done”?

c)The process of defining “ How it should be done”?

d)all of the above

12)Which of the following is a non-functional quality characteristic?

A. Feasibility

B. Usability

C. Maintenance

D. Regression

13) What is the major problem that may prove disastrous at the end of software development life cycle?

A testing

B. designing

C. requirement analysis

d.none of the above

14) Corrective maintenance is

a. the maintenance due to the changes in the environment

b. to improve the system in some way without changing its functionality

c. correction of Post release errors

d. None of the above

15.Design phase includes?

a) data, architectural and procedural design only

b) architectural, procedural and interface design only

c) data, architectural and interface design only

d) data, architectural, interface and procedural design

16)Why are both specification-based and structure-based testing techniques useful?

A. They find different types of defect.

B. Using more techniques is always better.

C. Both find the same types of defect.

D. Because specifications tend to be unstructured.

17) User Acceptance Testing

a) same as Alpha Testing

b) same as Beta Testing

c) combination of Alpha and Beta Testing

d) none of the above

18) White Box Testing is required for :

a. Finding Typological errors and Syntax checking

b. Finding design errors.

c. Finding the logical errors creeping into the work.

d.All

19. Alpha testing is differentiated from Beta testing by

a. The location where the tests are conducted.

B The types of test conducted

c The people doing the testing

d The degree to which white box techniques are used

20 Acceptance testing means

a. Testing performed on a single stand – alone module or unit of code

b. Testing after changes have been made to ensure that no unwanted changes were introduced

c. Testing to ensure that the system meets the needs of the organization and end user.

d. Users test the application in the developers environment

21 Which of the following is true?

a) Debugging is intended to localize the fault and cure it whereas testing is intended to discover faults

b) Debugging is done by the developers only and testing is done by the testers only

c) Debugging must be supported by tools, it cannot be done manually

d) There is no difference between debugging and testing.

22 .We split testing into distinct stages primarily because:

a) Each test stage has a different purpose.

b) It is easier to manage testing in stages.

c) We can run different tests in different environments.

d) The more stages we have, the better the testing

23) What types of errors are missed by black-box testing and can be uncovered by white-box testing?

a. behavioral errors

b. subtle logic errors

c. performance errors

d. input error

24) An execution environment configured for testing. This May consist of specific hardware, OS, network topology, configuration of the product under test, other application or system software, etc.

a)Test Framework

b) Test Bed

c) Test Scripts

d) None of the above

25)Which of the following are good candidates for manual static testing?

A. Requirement specifications, test plan, code, memory leaks.

B. Requirement specifications, test cases, user guides.

C. Requirement specifications, user guides, performance.

D. Requirement specifications, website, code, use cases
